Day - 1 Lec - 1

DBMS :- (Data base management system,

Data :- 

Eg:- Image :- divided into pixels and that pixels ~~does not~~ store in bits/bytes.
(The reason being said, yeh photo 1.5mb ki hai).

* Data is useless or meaning less until it is processed or interpreted.

Data \longrightarrow Information

* Information:-

- \rightarrow processed, organized, and structure data.
- \rightarrow provides content of the data and enables decision making.

→ Information means, processed data that makes sense to us.

[/* data is the new oil */]

<u>Data</u>	<u>VS</u>	<u>Information</u>
1. collection of facts.		1. puts facts into context.
2. Data is raw		2. Info. is organize.
3. meaningless		3. meaningful.
4. doesnot depend on Info		4. depends on data.

* Data base:-

→ A place / system where data is store in a way that it can be easily accessed, managed, and updated.

→ To make real use of data, we need DBMS.

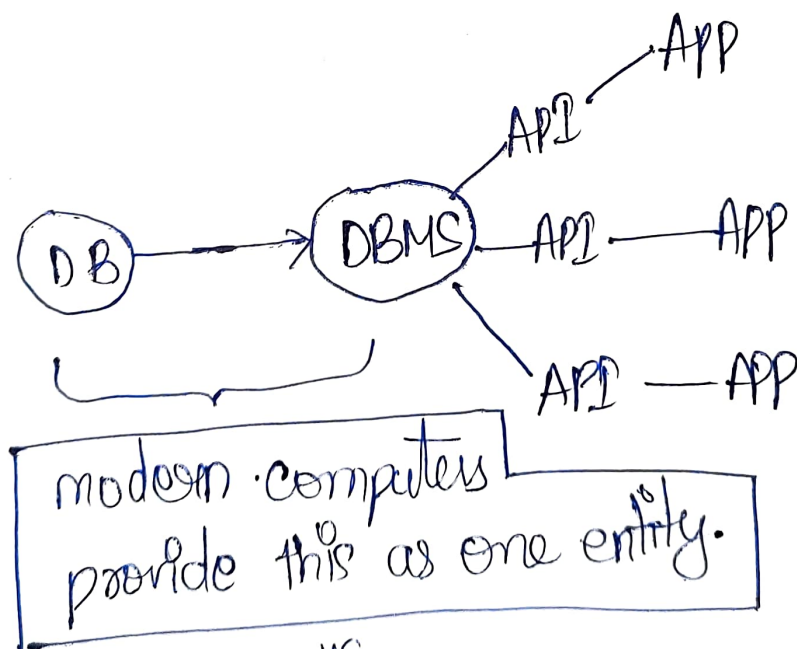

* Data Base manggement system :- (DBMS)

→ collection of interrelated data and a set of programs to access these data.

→ DBMS goal is to provide way to store and retrieve database info.

→ DBMS is a db itself with software and functionality.

→ used to perform CRUD of the data.
(addition, access, updating, deleting).

→ file system ^{vs} DBMS :-

→ file system is not efficient due to some factors like redundancy, difficulty in access, integrity, security, etc....
